

Production monitoring

TÜV NORD supports you with all welding-related tasks in the manufacture and operation of machinery, pressure vessels, pipelines and steel structures, and also in the qualification of welding procedures and personnel.

We can also monitor supplier production processes on your behalf based on a defined inspection and test plan (ITP). These supplier audits (second party inspection) can for example include assessment and documentation of invitations to tender, design specifications, material procurement, production processes and tests.

Following the actual monitoring and as a result of the inspection, we will also support you in the drafting of declarations of conformity and other approval-related documents. These can then be used, among other things, in order to release insurances or bank credits.

As an independent assessment body we also support you with certification audits (third party inspection) of your production processes.

TÜV NORD is your partner for fulfilment of all obligations in connection with welding. We also provide regular seminars and training courses in order to complement your own in-house training, along with further services in connection with material, welding and test technology.

TÜV NORD - Making our world safer.

TÜV®

Our Services

- Assurance of quality-compliant component manufacture (for national and international suppliers)
- Validation of processes
- Welding-related assessment
- Personnel qualification according to all national and international standards and regulations
- Process qualification according to all national and international standards and regulations (if required also taking specific standards into consideration, such as PED 2014/68/EU with AD 2000 and CPR 305/2011/EC with Eurocodes as well as DVGW - German Technical and Scientific Association for Gas and Water)
- Qualification of manufacturers of welded structures
- Training and further training of specialist welding personnel

The benefit to you:

- Implementation of your specific test requirements (supported by our know-how from the publicly-regulated area)
- Flexible support
- Deadlines can be more easily met
- One-stop international project support
- Evidence of the qualification of your processes based on TÜV NORD documents, recognised and respected the world over
- Identification of nonconformities
- Enhanced value creation
- Time savings and increased efficiency

Our competence:

- Many years of experience gained from national and international projects
- Accredited as a neutral inspection body
- Reliable and above all current knowledge of national and international regulations and standards
- Experts on hand to answer questions about current regulations and standards and also explain legal aspects and implications
- Rapid reaction times
- Strong regional presence
