

For all those who want to reach their destination safely.

On the route from A to B safety is essential.

Certification of vehicle bodywork and load restraint facilities

Training for forwarding companies, drivers, dispatchers and loaders

TÜV NORD load safety check for forwarding companies and vehicle fleets

Expert opinions and solutions for law courts and associations

Although lawmakers issue strict requirements, around 70 percent of all loads are still poorly secured or not secured at all. The result: damage to property totalling hundreds of millions of Euros, serious or fatal harm to persons. In addition, an accident often leads to a loss of the company's good reputation. TÜV NORD's specialist area of "load safety" covers all links in the transport chain. We certify the robustness of the vehicle bodywork and the load restraint facilities,

and this gives vehicle manufacturers a head start with forwarding companies and loaders. TÜV NORD's load safety check is one of the best proofs of trust which forwarding agents can offer their customers. It demonstrates that a forwarding company has the brain power as well. You can fill up with still more knowledge in our training sessions and seminars. And last but not least, we provide expert opinions for courts of law and for associations.

Certified load safety binds customers.

TÜV NORD - Tested Load Safety

Success with cover letter and the TÜV seal

Safety represents a convincing argument for quality in what is a hard-fought market. Have your vehicles and their bodywork certified by TÜV NORD Mobility! And use safety to leave the competition way behind. Every time the lorry is loaded the clearly visible TÜV NORD seal of approval provides a good advertisement for your company. The certificate greatly simplifies checks by the police or the BAG.

What we offer you:

- Static and dynamic test of the vehicle bodywork in accordance with DIN EN 12642
- Evaluations and documentations also help with future developments
- Test of lashing points in accordance with DIN EN 12640
- Assessment of sliding friction values for loading surfaces and loading grooves
- We can carry out many tests, measurements, model calculations, directly on your premises
- Careful test methods mean that the materials involved remain undamaged.

TÜV NORD Expert Opinions

Independent. Irreplaceable.

Regardless whether the expert opinions concern long-distance heavy transport or are needed, in regard to an accident: you can place your trust in our independent expert knowledge.

We are ready to carry out dynamic and static tests at your premises

Your well-trained employees work more quickly and more efficiently

TÜV NORD - Load Safety Check

A good indication of responsibility

We won't make the roads completely safe. But we can reduce the risks. Besides the technical requirements for safety, people are the deciding factor. We train your employees. You save by avoiding damage to loads and vehicles. At the same time well-trained staff secure the loads more quickly and more efficiently. Your customers are happy to see that too.

What we offer you:

- We check and determine the level of knowledge of all employees involved in securing loads
- We check that your vehicles are properly fit for the transport
- We check whether sufficient load restraint devices are available
- Are the lashing points in good condition or are they already worn?
- Is the vehicle loading compartment in good condition?
- When the test is complete your company is presented with a certificate

Our experts inspect your vehicles in connection with regard to the issuing of a certificate of exemption

We offer individual solutions tailored to meet your needs

Against unsustainable road conditions.

Overview of services

- Solutions for problems in all areas of the transport chain
- Testing and certification of vehicle bodywork and resources used for restraining loads (static and dynamic)
- Training programmes for forwarding companies, drivers, dispatchers and loaders
- TÜV NORD load safety check for forwarding companies and vehicle fleets
- TÜV NORD logistics check for loaders and for warders
- Expert opinions for law courts and associations

These advantages are well worthwhile too

- We check the vehicles directly at your premises
- We develop individual solutions for you
- We check the potential for reducing costs you incur as the result of down times and damage
- You improve your good image
- You have fewer problems with inspections
- You improve collaboration between loader and transporter
- You secure your loads more cheaply, more efficiently and more quickly
